

Exercise Name: Automate Employee Leave Request and Approval Workflow Using Google Forms and N8N.

Streamline employee leave request submissions and approvals from HR or team managers.

Instructions:

- **Create a Google Form** for employees to submit leave requests, capturing details such as dates, reason, and department.
- **Use N8N to automate the approval process**, which routes requests to managers based on criteria (e.g., department) and updates a shared leave tracker (Google Sheets).
- **Send approval/denial emails** automatically to the employee once a decision is made.

Expected Outcome: HR professionals or managers will have an automated leave request process, making it easier to track and approve requests with minimal manual effort.

All the best ;)
